DETAILED ACTION

Allowable Subject Matter

1. Claims 21-24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

2. Claims 19-20 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

prior art fails to show an I-shape support structure including at least one web defining at least one flex axis with respect to the remaining support structure, the support structure defining first and second opposing support surfaces facing one another on one side of the at least one web and defining at least one rigid arm movable about the flex axis on an opposite side of at least one web.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7, 10-15 and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Uchikawa (4,570,095).

Art Unit: 2834

Uchikawa discloses in fig1–3 an apparatus comprising: a single support structure (fig.1) having a first (5) and second resilient arm (6) that is mechanically actuated, wherein the actuation produces spatial displacement. Uchikawa also discloses a piezoelectric actuator (1) located within the enclosed periphery of the support member and operably positionable between the first and second inwardly directed opposing supports for moving the support between a rest position (lh) and an actuated position (lh).

Referring to claim 11, Uchikawa discloses the support structure in figs. 1-3 comprises a single piece of material (col.3 lines 16-18) having shape memory with high of elasticity and high strength. Uchikawa also discloses, a piezoelectric actuator (1) operably positionable with opposite longitudinal ends engageable with the first (5) and second (6) opposing actuator supports surfaces.

Response to Arguments

4. Applicant's arguments with respect to claims 1-7,10-15 and 19-24 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Art Unit: 2834

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
